

Amendments to the Claims:

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A digital photographic product for use in an inkjet printer, said product comprising:
 - a liner;
 - an adhesive adhered to said liner;
 - a photographic paper releasably carried by said adhesive, said photographic paper having at least one continuous, uninterrupted half-cut extending through said photographic paper but not through said liner, to define a photograph area smaller than a photographic image to be printed on said photographic paper by an inkjet printer, said photographic image including a safety margin as part of said photographic image, thereby leaving a marginal portion outside of said photograph area, said marginal portion being dimensioned to receive said safety margin but not said photograph area, so that, when said photographic image is printed on said photographic paper using said inkjet printer, said photograph area can be peeled from said marginal portion of photographic paper leaving said safety margin, said liner, and said adhesive to produce a photograph carried completely by said photograph area, having smooth edges and no white border and no adhesive adhered to said photograph.

2. (Cancelled)

3. (Original) The digital photographic product as recited in claim 1, wherein said liner has a weight and said photographic paper has a weight, and said weight of said liner is less than said weight of said photographic paper.

4. (Currently Amended) The digital photographic product as recited in claim 1, wherein said half-cut is [has] made to provide said photograph in the shape of a rectangle with rounded corners

5. (Currently Amended) A digital photographic product made by a process comprising the steps of:

releasably adhering photographic paper to a liner to form a photographic product so that said photographic paper can be peeled from said liner without adhesive remaining on said photographic paper;

cutting said photographic product into uniform sheets of pre-determined size; making a continuous, uninterrupted, half-cut through said photographic paper but not through said liner of each sheet of said photographic paper to define a marginal portion and a photograph area so that, when a photographic image that includes a safety margin as part of said photographic image is made on said photographic paper of said each sheet, said safety margin is printed in said marginal portion, outside said half-cut so that said photograph area can be peeled from said sheet, leaving said adhesive, said liner and said marginal portion, said photograph area containing [to

have] a photograph with smooth edges and no white border and no adhesive adhered to said photograph.

6. (Original) The digital photographic product, as recited in claim 5, wherein said process further comprises the step of printing on said photographic paper with an inkjet printer a photographic image larger than said photograph area so that said photographic image extends beyond said half-cut.

7. (Cancelled)

8. (Currently Amended) The digital photographic product, as recited in claim 5, wherein said photograph area is in the shape of a rectangle with [has] rounded corners.

9. (New) A digital photographic product for use in an inkjet printer, wherein said product comprises a special paper proper to printing a photograph thereon, said digital photographic product comprising:

a liner;

an adhesive adhered to said liner; and

a photographic paper releasably carried by said adhesive,

said photographic paper defining a photographic printing area and having a continuous, uninterrupted half-cut extending through the perimeter defining a rectangle of rounded corners according to the size of a photograph to be printed, said half-cut defining a

marginal portion inside said photographic printing area, so that, when a photographic image is printed on said photographic paper on said photographic area, said photograph can be peeled from said liner and said adhesive, leaving said marginal portion of said photographic paper, said photograph having smooth edges and no adhesive adhered to said photograph.
